The prices above valid for 2011/12.

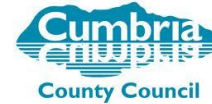

Bespoke Moodle VLE Services

Along with our standard hosting packages (overleaf) LUNS can also offer a range of bespoke Moodle & Mahara deployment and development services.

Large-Scale Deployment

LUNS have a wealth of experience in the design and management of Moodle VLE deployments from institutions with only a handful of users up to a single platform with over 750,000 users. With core Moodle & Mahara developers on staff we have significant skills in optimising and fine-tuning systems to ensure the delivery of high-availability (99.99%), highly efficient systems.

The expertise of LUNS staff and the advice given to us by them has meant that our institutions have enjoyed a cost effective and trouble free service.

The Open University

LUNS has performed excellent work... I am very impressed by the work of LUNS.

Bespoke Development

Our development teams comprise core Moodle & Mahara developers who have contributed significantly to the codebase for both projects. We are able to offer these skills to our clients to help them enable their e-Learning environment to deliver the maximum value to their institution.

Integration Services

At LUNS we're aware that many institutions, particularly in the HE sector have multiple integration requirements with their VLE including two-way interaction with

- Student Records Systems
- Single-Sign On Systems
- Library Management Systems
- Plagiarism Detection Software

Thanks to the knowledge and expertise within the LUNS development teams we have successfully integrated Moodle & Mahara platforms with all these systems, including those based on both proprietary and Open Source software.

Just some of our customers that have benefited from the Moodle hosting, development and integration services offered by LUNS
