

Award Winning Broadband Network Delivery

LUNS is the proud holder of a [Queen's Anniversary Prize for Higher & Further Education for the extensive regional broadband networks rolled out across the counties of Lancashire & Cumbria.](#)

Awarded in 2005, the prize specifically recognises LUNS involvement with the Cumbria and Lancashire Education Online (CLEO) Regional Broadband Consortium. Over the last decade, LUNS has been responsible for designing, building and maintaining the CLEO network delivering internet connectivity to around 1000 schools, including remote primary schools in Lakeland valleys and rural Lancashire. Remote schools such as these would either be beyond the reach of other commercial telecommunications operators or the costs for providing broadband connectivity would be prohibitively expensive.

With its multi-skilled network design and engineering teams and with a full OfCom telecommunications licence, LUNS is able to provide connectivity over a variety of media from dedicated high speed fibre-optic links to wireless radio solutions and xDSL connectivity.
